Appl. Environ. Microbiol. 61:2193-2202 (1995).

-!- FUNCTION: RECOGNIZES THE DOUBLE-STRANDED UNMETHYLATED SEQUENCE GATC AND CLEAVES BEFORE G-1.

-!- CATALYTIC ACTIVITY: Endomucleolytic cleavage of DNA to give specific double-stranded fragments with terminal 5'-phosphates.

-!- SIMILARITY: TO R.DPNII AND R.MBOI.

-i- FUNCTION: SERINE PROTERASE, SECRETED SPECIFICALLY DURING THE
MYCOPARASITIC PROCESS, WHICH IS INVOLVED IN THE DEGRADATION
PHYTOPATHOGEN CELL WALLS, MEMBRANES AND OF THE PROTEINS RELE
AFFER LYSIS OF THE HOST.

-i- SUBCELLULAR LOCATION: Secreted.
-i- INDUCTION: BY MYCELIA, FUNGAL CELL WALLS, AND CHITIN, BUT ON
IN THE ABSENCE OF GLUCOSE.
-IN THE ABSENCE OF GENERALS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 InterPro; IPR000209; Peptidase_S8.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NCBI_TaxID=632;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DOMAIN: The methionine-rich domain could provide binding sites exogenous copper ions. This methionine-rich region is probably important for copper tolerance in bacteria. SINILARITY: BELONGS TO THE FAMILY OF MULTICOPPER OXIDASES. SIMILARITY: CONTAINS 3 PLASTOCYANIN-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      41 STSGSGS 47

PERF: genomic organization, chromosomal localization and promoter analysis of the human and mouse genes.";
Oncogene 14:1445-1451(1997).

-i. FUNCTION: POTENT TRANSCRIPTIONAL REPRESSOR THAT BINDS TO THE ELEMENT OF THE ETS2 PROMOTER. MAY REGULATE OTHER GENES INVOLVE IN CELLULAR PROLIFERATION (BY SIMILARITY).

-i. SUBCELLULAR INCATION: Nuclear.
-i. SUBCELLULAR LOCATION: Nuclear.
-i. PTM. PHOSPHORYLATED BY MULTIPLE KINASES INCLUDING PROBABLY ERK PHOSPHORYLATION REGULATES THE ACTIVITY OF ERF (BY SIMILARITY).
-i. SIMILARITY: BELONGS TO THE ETS FAMILY.
                                                                                                                                                   This SWISS-PROT entry is copyright. "Role of the fixGHI region of Azorhizobium caulinodans in free-living and symbiotic nitrogen fixation.";

FEMS Microbiol. Lett. 114:185-189(1993).

-i- FUNCTION: CYTOCHROME C OXIDASE IS THE COMPONENT OF THE RESPIRATORY CHAIN THAT CATALYZES THE REDUCTION OF OXYGEN TO WATER. SUBUNITS 1-3 FORM THE FUNCTIONAL CORE OF THE ENZYME COMPLEX. CO I IS THE CATALYTIC SUBUNIT OF THE ENZYME. ELECTRONS ORIGINATING IN CYTOCHROME C OR A QUINOL ARE TRANSFERRED TO THE BIMETALLIC CENTER FORMED BY A HIGH-SPIN HEME AND COPPER B.

-i- CATALYTIC ACTIVITY: 4 ferrocytochrome c + O(2) = 4 ferricytochrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Fiam.

Fatty acid transport protein impairs uptake homologue to the murine fatty acid transport protein impairs uptake and growth on long-chain J. Biol. Chem. 272:8531-8538(1997)

J. Biol. Chem. 272:8531-8538(1997)

-! FUNCTION: MAY BE INVOLVED IN LONG-CHAIN FATTY ACIDS UPTAKE, AND PRIOR TO METABOLIC UTILIZATION. MAY PLAY AN IMPORTANT ROLE IN PRIOR TO METABOLIC UTILIZATION. MAY PLAY AN IMPORTANT ROLE IN UPTAKE OF THESE HYDROPHOBIC COMPOUNDS UNDER CONDITIONS WHERE FAI ACID SYNTHESIS IS COMPROMISED.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                VARIANT

Ballinger D.G., Xue N., Harshman K.D.;
"A Drosophila photoreceptor cedll-specific protein, calphotin, binds calcium and contains a leucine zipper.";
Proc. Natl. Acad. Sci. U.S.A. 90:1536-1540(1993).
-i- FUNCTION: MIGHT FUNCTION AS A CALCIUM-SEQUESTERING "SPONGE" TO REGULATE THE AMOUNT OF FREE CYTOPLASMIC CALCIUM. IT BINDS 0.3 MOLOF CA+2 PER MOLOF PROTEIN.
-i- SUBURNIT: HOMODIMER (PROBABLE).
-i- TISSUE SPECIFICITY: SOMA AND AXONS OF PHOTORECEPTOR CELLS OF COMPOUND EYES AND OCELLI.
-I- DEVELOPMENTAL STAGE: EXPRESSED EARLY IN PHOTORECEPTOR CELL DEVELOPMENT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      EMBL; L02111; AAA28405.1; -.
